The lists of the application remind one of a bank statement. The system of statistical graphs updates at the same time the transactions take place, which allows you to get an idea of the liquidity of different accounts. In categorizing each expense and editing the budget itself, you can see where your money goes — and how to make it go further! iBank does this visually so that you can see your daily progress and compare past, current or projected budgets. The option to work with different currencies, programmed transactions, prediction of future account balances or check printing are some of the interesting characteristics of iBank, what's more, the application is able to import data in the following formats: OFX, QFX, QIF and CSV. You can enter information manually, or sign up for iBank's optional Direct Access* service — connecting to over 10,000 banks worldwide and automatically delivering your latest transaction data. Its expert trading features include short and long puts and calls or stock option trading. Throughout the app, interactive bar graphs and pie charts deliver instant access to the info you need.
